

# The Big Dipper

2 lids with racks designed for maximum efficiency and keeping the operator safer during the dipping process

2" overflow port to prevent boilover

Built-in thermometer.

1/4" drain to completely empty tank

Move easily with a standard pallet jack or forklift

200,000 Btu Propane Burner with gas regulator provides steady even heat for better temperature control

**Production output 45 deep boxes/hour or 450 boxes/day...with 4-minute cycle**

**Heavy-duty 14 ga and 11 ga 304 stainless steel construction**

# FAQ on Dipping Boxes

## How Long Should I Dip?

When dipping with HIVEGAURD Dipping wax we recommend 3 minutes at 300° F for preservation.

## Can Dipping Sterilize a Wooden Box?

The process is the same except for sterilization you dip for 10 minutes at 300° F to “kill” diseases, such as AFB, EFB, etc, for any USED boxes.

## Can I Dip Older Boxes That Are Already Painted?

Yes!

## Is Wood Glue Damaged When Dipped?

The glue is not negatively affected. The wax encapsulates the glue and makes it water-resistant.

## How Much Wax Does it Take Per Box?

A deep box takes approximately 0.4 lbs while a medium super take approximately 0.3lbs
